33	3(j)	This problem is not appropriate here. Change to: $88 - 8 \times 6 \div 3 - 80 \div 8 \times 7$ Answer: 2	
96	12	The second line under the image should be: $\frac{3}{4} \div \frac{3}{8} = 2$	
117		Area of triangle D, second line $= \frac{1}{2} \times [(9 \times 4) - (6 \times 4)]$	5/1/2015
133	26(b)	The height should be labeled rather than the side of the triangle.	

### Workbook

32	1	How <b>much</b> did he spend altogether?	
41	2(d)	twelve million, nine <b>hundred four</b> thousand (Remove comma after nine hundred)	
124	8	(Give the answer in ounces as a mixed <b>number</b> .)	
126	21	The figure is made up of two <b>parallelograms</b> .	
141	16	The ratio <b>of</b> Gary's weight...

## Tests

Page				
21	Unit 1, Ch. 5 Test A	12	This answer can be estimated in various ways. The exact answer is \$60,490,000. Accept answers within 20 million of this answer. For example: Round to \$500,000 and 120 to get the estimated answer of \$60,000,000 which is the answer in the answer key. Or round to \$500,000 and 100 to get the estimated answer of \$50,000,000. (Note: There is no exact answer to a problem asking for an estimated answer. There are no hard and fast rules for how to round the numbers. Students should round to numbers that are easy for them to calculate with. Some students are better at mental math than others and might round in such a way that the estimated answer is closer to the exact answer. The simplest calculation occurs when rounding all numbers to a number with only one non-zero digit, but rounding to a number with 2 non-zero digits, such as 120, does not give an <i>incorrect</i> estimate compared to rounding to 100 instead.)	
21		13	This answer can be estimated in various ways. The exact answer is \$260,880. Accept answers within 100,000 of this answer. For example: Round to 2200 members paying \$100 a year, estimate is \$220,000. Round to 2000 members paying \$120 a year, estimate is \$240,000. Round to 2000 members paying \$100 a year, estimate is \$200,000.	
35	Unit 1 Cum. Test B	13	Change to: Which of the following is a prime number	
120	Unit 4, Ch. 1 Test A	9	Change last sentence to: <b>What fraction of her stamps did she have left?</b>	
125	Unit 4, Ch. 2 Test A	7	Change second sentence to: He spent $\frac{1}{2}$ as much on the <b>chair</b> as he did on the <b>table</b> .	
128	Unit 4, Ch. 2 Test B	8	The correct answer is 65. As that is not one of the choices, change the last sentence to read: <b>When she has finished baking all the tarts, how many tarts will she have baked?</b>	
148	Unit 4, Ch. 5 Test A	9	Wording is confusing. Also, milliliters would not be used for a tank; the capacity of this "tank" is only 175 ml. Change units to liters. A tank was filled to $\frac{2}{7}$ of its capacity. Tricia added 90 liters of water to fill the tank to $\frac{4}{5}$ of its capacity. How many more liters of water are needed to fill the tank completely?	
150	Unit 4, Ch. 5 Test B	4	Change last sentence to: How many grams <b>in all</b> of cornflakes are needed to fill the container completely? (correct answer is D, 400 g)	
184	Unit 5, Ch. 3 Test A	6	The letter O should be moved to the left to the intersection of the solid lines, not the dotted lines.	
	<b>Answers</b>			
256	Unit 1, Ch. 5 Test A	12	\$50,000,000 is also acceptable. Answers can vary; see comment for p. 21 above.	
		13	Answers should be around \$260,000.	
256	Unit 1, Cum. Test B	12	C	
260	Unit 4, Ch. 5 Test A	9	35 liters (if problem is changed as suggested above)	
260	Unit 4, Ch 5 Test B	4	D	
261	Units 1-4, Cum. Test B	8	A	

262	Units 1-6 Test B	13	B
